

## **ESP Working Group for Paediatric and Perinatal Pathology – Report from 2018**

The ESP meeting was held in Bilbao, Spain, between 8st September – 12nd September 2018.

As usual, our working group worked very hard in the selection of topics and areas of interest to general pathologists and we were very well succeeded with our proposed program, hosting 4 sessions. In addition, there is an oral free paper session and poster sessions. This year a videomicroscopy session was being performed jointly with Digestive Disease WG and a symposium was held together with Nephropathology WG.

Our session in Bilbao were very well attended, very participated with many questions and input from the audience.

In our business meeting we had the opportunity to present our report to members and presented the topics included in the draft for 2019 meeting in Nice.

Once again, we stressed the need of all pathologists that have an interest on Paediatric and Perinatal Pathology to become members of the WG and of the PPS. We have currently 81 registered members:

Dr Isabel Colmenero took over and is the new chair of the WG. Dr. Aurore Coulomb offered and asked to be proposed as co-chair, as she is very much involved in the organization of Nice ECP. Her application was voted during the business meeting and approved.

Paula Borralho Nunes
